

REBUILD RESTORE MAINTAIN

“ECL Engineered Coatings Ltd., relies on our labour partner, the IUPAT, to provide us with skilled trades people that can correctly prepare various substrates and apply the precise mils needed to meet today’s strict coating specifications and our clients requirements.”

Thomas Corbett, G.S.C
President, ECL Engineered Coatings Ltd.

In support of Canada’s effort to rebuild, restore and maintain its critical infrastructure, the International Union of Painters and Allied Trades (IUPAT) in association with the Society of Protective Coatings (SSPC) and NACE International (formerly the National Association of Corrosion Engineers) presents the Coating Application Specialist Certification Program (CAS).

CAS trainees receive theoretical and practical training in the complex task of applying coatings to precise specifications, to reduce the effects of corrosion on key elements of our industrial society. Ships, Bridges, Water Tanks, Gas and Oil Pipelines and Storage Facilities, Waste Water Facilities, Power Generation Plants all require skilled craftsmen and women to apply today’s high performance coatings.

IUPAT is pleased to participate in developing and maintaining highly skilled workers at this most important juncture in our history. Corrosion is taking its toll on these industries and we must respond urgently before it becomes an unmanageable problem.

It’s all about proper asset management.
