Durable Coating Application For Lasting Protection. Quickly. Economically. Anywhere...

Exceeding Expectations

Extended service life, reduced downtime and environmental safety are tough challenges faced by mining, municipal and industrial operations around the world. With the expert application of state of the art polyurethane technologies, Engineered Coatings Ltd. is meeting those challenges... and exceeding expectations for fast application, long term reliability and cost effectiveness.

Mining

Our journeyman operators bring years of experience in the application of abrasion resistant linings and rock support coatings for the mining industry throughout the world. The high velocity spray application of Miroc Mineguard™ provides an economical, proven alternative to conventional, labor intensive shotcrete or screen & bolt applications. Tested and supported by the Mining Industry Research Organization of Canada, this revolutionary plastic coating adheres tenaciously to rock surfaces and sets in seconds, bringing an end to high material handling and labor costs. Slurry pipes coated with high adhesion polyurethanes resist wear, corrosion and abrasion for extended operating life and reduced downtime. Engineered Coatings Ltd. mobile teams employ the most efficient, high-tech preparation methods and spray equipment, operating in the most difficult-to-access environments, to ensure unsurpassed quality and consistency in every mining application.

Municipal

The high costs of infrastructural development, maintenance and repair have many municipalities searching for long-term, economical alternatives to traditional construction and reconstruction practices. For both new and existing installations, Engineered Coatings implements solutions that stand the test of time. Our professionally trained crews employ extensive surface preparation and restoration techniques to ensure reliability and longevity on every project. Snapset polyurethane interior and exterior coatings, approved by the National Sanitation Foundation and expertly applied, provide seamless, chemical resistant, durable protection for water towers, water and sewage plants, pipelines and containment systems. Existing outdoor structures – bridges, towers and buildings – are fully restored and protected against corrosion and weathering.

Industrial

Our quick-response teams of coating applicators understand the unique demands of industry – economy, longevity and minimal downtime are elements that are critical to overall productivity. We meet those challenges and exceed expectations with a variety of environmentally friendly coating solutions for any application.

- containment systems
- pipeline coatings
- tank linings
- towers, stacks and confined areas
- liquid processing equipment
- plant painting
- marine coatings

With solvent-free, fast cure coatings, specialized equipment, factory trained application crews and a commitment to total customer service, Engineered Coatings has the experience and expertise to tackle the most demanding industrial project.

Full Package Solutions

From initial inspection and consultation to final testing and warranty, we provide a complete solution. Proper safety and environmental procedures are utilized on every job we do, for our employees and yours. Our fully equipped teams can be mobilized within days for projects around the globe, and our low labor rates mean that quality is not sacrificed by economic limitations. Engineered Coatings provides lasting protection through technology, training and commitment.

Tomorrow's solutions... today.
